Pictures at SERE 2014

Day 3 (July 2)

Task's schedulability and supply simulation relation

Definition 3. *A task $T \in \mathsf{T}^*$ is schedulable by supply $S \in \mathsf{S}^*$ if whenever $T\|S \Rightarrow P$ then (i) $P \rightarrow$ and (ii) for all $P \xrightarrow{\alpha}$ we have $\alpha^b \cap \mathsf{R} = \emptyset$.*

Definition 4. *A relation $\mathscr{S} \subseteq \mathsf{T}^* \times \mathsf{S}^*$ is a supply simulation relation if for all $(T, S) \in \mathscr{S}$, $S \rightarrow$, and if $S \xrightarrow{\alpha} S'$ then*

1. *there exists $T \xrightarrow{\beta} T'$ with $\mathsf{sat}(\beta, \alpha)$ and $(T', S') \in \mathscr{S}$, and*
2. *for any ρ, if $T \xrightarrow{\rho} T'$ and $\rho \trianglelefteq_T \alpha$, then $(T', S') \in \mathscr{S}$.*

If there exists a supply simulation relation between T and S, then we write $S \models T$.

Lemma 1. *A task $T \in \mathsf{T}^*$ is schedulable by supply $S \in \mathsf{S}^*$ if and only if $S \models T$.*

Philippou, A., Lee, I., Sokolsky, O. 'PADS: An Approach to Modeling Resource Demand and Supply for the Formal Analysis of Hierarchical Scheduling' Theoretical Computer Science, 413(13, 2-20 [2012]
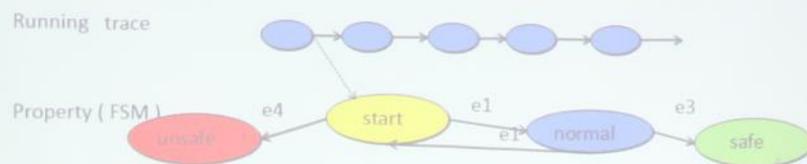

Background

- Cyber-Physical System (CPS) in Many Key Areas: energy, transportation, aviation, etc.
  - Complex: open, large scale, multi-components
 - High Reliability Requirements
